Voracious Squagutt

Guttur squamosa vulgaris

Height: 57–62 cm

Weight: 29–36 kg

Diet: Omnivore

Top Speed: 20–30 mph

Latin name: *Guttur squamosa vulgaris*

Meet the Voracious Squagutt. True to its name, this Labrador-sized creature spends the majority of its day eating anything it can get its teeth into. The rest of the time you will find it reclining above the swamp on a low lying branch. It has been known to sleep for around 14 hours per day!
